

Swedish Red Cross University's Strategies 2022–2026

A human and global perspective in nursing and health defines the Swedish Red Cross University's unique profile in education, research, and collaboration.

The Swedish Red Cross University has a long tradition of education – ever since 1867 we have trained highly regarded and valued nurses. The university provides a critical service to society and about 200 nurses and 50 specialist nurses in intensive care, infectious care, and psychiatric care graduate annually from the Swedish Red Cross University. We also contribute to increasing the competence among clinical supervisors by offering specific training courses.

We are located at Campus Flemingsberg in Stockholm and have 850 students and 70 members of staff.

Main areas for the Swedish Red Cross University's activities in 2022-2026 are education, research, collaboration, internationalisation, and quality. The Swedish Red Cross University will:

- offer courses and programmes with a clear global profile that are popular within health care both nationally and internationally
- have researchers within a strong academic and stimulating environment whose cutting-edge expertise focuses upon the area of "Health Sciences in a Global Perspective"
- collaborate purposefully to generate societal benefits and use communications as an integral part of our core activities
- be characterized by the presence of international perspectives that permeate research and education at all levels
- be a fully quality-driven organization with good finances as well as systems, routines, and processes that are stable, transparent, and secure.

By constantly learning, being responsible, committed, and humble we make a difference together.
